ADDITIONAL INFORMATION SUPPORTING njd (e.g., paragraph 1 site conditions; paragraphs 2-3 rationale used to determine NJD, including information reviewed to assess potential navigation or interstate commerce connections; and paragraph 4 site information on waters of the U.S. occurring onsite): A wetland delineation report was received at the Waukesha office for review and concurrence. A review of the information available on the Racine County IMS (aerial photography and topographic mapping) indicates that the wetland boundaries have been correctly identified and are adequate to establish the extent of Corps jurisdiction.

The wetland delineation identified 2 separate wetlands areas with a combined surface area of 1.77-acres at the 89-acre site. A 0.1-acre wet meadow wetland was identified near Hoods Creek. This wetland is contiguous with Hoods Creek, which is tributary to the Root River, a navigable water of the US and is therefore jurisdictional.

The other wetland with a surface area of approximately 1.67 acres is confined to an isolated depression that lacks a surface water connection and adjacency to nearby Hoods Creek. Connections between the wetlands and interstate commerce was also considered but could not be identified. Therefore, this wetland is an isolated waters that would not be subject to Corps Section 404 jurisdiction.
